Network Capacity Planning Guideline (DOC-030)

Purpose: define when radio and transport capacity must be expanded.

Radio cells: a 5G cell is flagged for expansion when busy-hour PRB utilisation exceeds 70 percent for 10 days in a 30-day period. 4G cells are flagged at 80 percent.

Transport: aggregation links are upgraded when the 95th percentile utilisation exceeds 60 percent. Backbone links are upgraded at 50 percent.

Lead times: a new 5G carrier on an existing site takes 6 to 8 weeks. A new macro site takes 9 to 12 months including permits.

Events: temporary capacity (cells on wheels) must be ordered 6 weeks before large public events with more than 10,000 expected visitors.
